

Term	Description
Flip	An action to change the state of a card.
Peek	An action wherein the user is able to view the value of a face down card without other users seeing it.
Pile	A container for one or several cards.
Pile view	A view that displays the cards from pile, in their current state.
Session	An instance of a table with a deck which can be either local on one device or remote on several devices where other users can connect to the same table.
State	A card is either face down or face up. The value of a 'face down card' is not directly shown for the user, to view it one must either peek or flip the card. A 'face up card' has its value shown to everyone directly.
Table overview	A graphical overview of a common physical table where all created piles are shown and where users can choose to create or operate on piles.
Text bar	A bar of text on the top the table and pile view displaying information such as ip-address, table-mode, pilename, pile size and protection status.
