Definition of Done

In order for a User Story to be considered done, it should:

- Include code that adheres to the Sun Java guidelines and conventions.
- Include code that is effectively written with the app performance in mind.
- Meet the requirements specified in the story title and description, i.e. include functional and runnable code.
- Have been tested manually on an Android (4.0.3+) phone.
- Include relevant tests in the test suite.
- Include relevant documentation.
- Generate changelog entries for the story.
- Complete an investigation on refactoring needs, if any were found, log each as an issue.
- Obtain lock of parent branch, forward integrate from parent branch, make sure the code compiles and passes the complete test suite, merge the changes back, release lock of parent branch.
- Have at least one other developer review the changes made.
